

## Who we are

Different Projects are a creative digital production company making websites, social apps, mobile apps, games and more. We collaborate with leading agencies and brands like Orange, Channel 4 and ITV on projects that make the web a better place to interact, learn or just have a good time. We're sort of a cross between an agency and a web startup. We have great clients and we love doing projects that push the envelope technically and creatively.

## Who we're looking for

We need a Creative Developer is probably the best way to put it - someone who feels comfortable on both the front- and the back-end. Someone who loves learning new stuff, who's entrepreneurial, a true creative problem solver, not afraid to talk to clients and probably has a few of their own side projects going on. You'll have a few mobile apps under your belt (iOS preferably). You enjoy bridging the gap between creative and technology, working on concepts together with creatives/UX designers, mentoring the dev team and helping to recruit new team members to build our technical capacity to even more awesome levels. You're passionate about creating new digital products people will actually want to use - whether for clients or for ourselves - and will be directly responsible for the quality and success of our technical output.

## Skills & Experience

Essential (all of the above plus):

- HTML/CSS/Javascript master with a healthy interest in HTML5
- Mobile app experience – iOS and/or Android (native and HTML5)
- Love your version control (SVN/Git)
- 2-5 years experience in an agency or digital production environment producing projects on deadline for clients

Bonus points:

- Experience using one or more server-side languages, especially PHP, Python or Ruby
- Knowledge of applicable libraries and MVC frameworks, and the ability to write your own code in a reusable way
- Flash/AIR/Actionscript 3 experience
- Experience with one or more open source CMS platforms (Wordpress, Drupal, etc)
- Game development experience
- Agile/Scrum experience
- Likes getting hands dirty with 3rd party APIs

If this sounds like it could be you, send us a CV and some examples of the work that you're most proud of to [work@differentprojects.co.uk](mailto:work@differentprojects.co.uk)
